**Annotation in Lithuanian**

Dr.Kulikauskas svarsto: Kaip puoselėti alternatyvinę šviesuolių kultūrą? Nuo 1982 m., šimtais tyrimų, jis yra išvystęs visapusišką filosofiją, ugdančią nusiuteikimą nuolat lavintis, bręsti ir gyventi.

Dr.Kulikauskas siekia savo filosofiją įtvirtinti kaip tyrimo veiklą, galinčią įkvėpti šviesuolių kultūrą. Jisai prašo finansinės paramos trejų metų veiklai:

- Padaryti savo filosofiją prieinamą per teoretinę Apžvalgą ir taikomąjį Vadovėlį.
- Puoselėti ją taikančią visuomenę, kas mėnesį rengiant dirbtuves.
- Sudominti tyrėjus iš įvairių akademinų sričių 12 pranešimų Lietuvoje, 12 pranešimų užsienyje ir 12 akademinų straipsnių tarptautiniuose mokslo leidiniuose.
- Patikrinti savo filosofiją, taikant ją kiekybiniam, moksliniam, gyvenimiškam iššūkiui: tiksliai modeliuoti nuo svaigalų priklausomybę turinčių ar neturinčių asmenų ir grupių elgesį.

Vienijanti dr.Kulikausko darbų tema - neribota asmens branda. Ji suvokiama, kaip mokymasis, vadinasi, kaip branda savame suvokime. Į tai įeina teologijos ir filosofijos pirminis suvokimas, tiriant savo vaizduotės ribas. Taip pat psichologijos ir sociologijos pirminis suvokimas, atjaučiant įvairiausių išgyvenimus išgyvenančius žmones. Dr.Kulikauskas mėgina sukurti modelį, kuris tarnautų teologine, filosofine, psichologine ir sociologine prasme. Toks modelis grįstų tyrimo veiklą, žyminčią naują kultūrą.

**Annotation in English**

Dr. Kulikauskas considers: How to nurture an alternative culture of independent thinkers? Since 1982, by way of hundreds of investigations, he has developed a comprehensive philosophy which fosters an attitude of learning, growing and living forever.

Dr. Kulikauskas is working to establish his philosophy as a practice of inquiry which may inspire a culture of independent thinkers. He seeks financial support for three years:

- To make his philosophy accessible as a theoretical Overview and as a practical Handbook.
- To foster a community of practice by organizing monthly workshops.
- To interest various disciplines of the academic world with 12 presentations in Lithuania, 12 presentations in other countries and 12 academic papers in international journals.
- To test his philosophy by applying it to a quantitative, scientific, real life challenge: accurately modeling the behavior and morality of addictive drug use by individuals and groups.

A unifying theme in Dr.Kulikauskas's work is unlimited personal growth. He thinks of this as learning, in other words, as growing in understanding for oneself. This includes first-hand understanding of theology and philosophy by exploring the limits of one's imagination. It also includes first-hand understanding of psychology and sociology by empathizing with people in the widest variety of real life experiences. He seeks to formulate a model which makes sense theologically, philosophically, psychologically and sociologically. Such a model may ground a practice of inquiry which defines a new culture.

## II. PROJECT IMPLEMENTERS

### 1. PRINCIPAL PROJECT IMPLEMENTERS

#### 1. Project leader

Position in the project	Project leader (Researcher) in 2017-2020
Academic degree	dr.
Year of awarding the doctor's degree	1993
Name	Andrius Jonas
Last name	Kulikauskas
Gender	male
Year of birth	1964
Phone	+370 607 27 665
E-mail address	andrius-jonas.kulikauskas@vgtu.lt
Workplace and the position	Vilnius Gediminas Technical University, Department of Philosophy and Communications, Lecturer
Institution employing for the implementation of the project	Vilnius Gediminas Technical University

#### Other principal project implementers

### 2. NON-PRINCIPAL PROJECT IMPLEMENTERS

<b>1.</b>	
Position in the project of the project implementer	Junior researcher in 2017-2020

### III. PROJECT JUSTIFICATION AND DESCRIPTION OF THE ACTIVITIES

<p><b>1. Objective and tasks</b></p> <p>Dr. Kulikauskas considers: How to nurture an alternative culture of independent thinkers? Since 1982, by way of hundreds of investigations, he has developed a comprehensive philosophy which fosters an attitude of learning, growing and living forever.</p> <p>Dr. Kulikauskas is working to establish his philosophy as a practice of inquiry which may inspire a culture of independent thinkers. He seeks financial support for three years:</p> <ul style="list-style-type: none"> <li>• To make his philosophy accessible as a theoretical Overview and as a practical Handbook.</li> <li>• To foster a community of practice by organizing monthly workshops.</li> <li>• To interest various disciplines of the academic world with 12 presentations in Lithuania, 12 presentations in other countries and 12 academic papers in international journals.</li> <li>• To test his philosophy by applying it to a quantitative, scientific, real life challenge: accurately modeling the behavior and morality of addictive drug use by individuals and groups.</li> </ul> <p>A unifying theme in Dr.Kulikauskas's work is unlimited personal growth. He thinks of this as learning, in other words, as growing in understanding for oneself. This includes first-hand understanding of theology and philosophy by exploring the limits of one's imagination. It also includes first-hand understanding of psychology and sociology by empathizing with people in the widest variety of real life experiences. He seeks to formulate a model which makes sense theologically, philosophically, psychologically and sociologically. Such a model may ground a practice of inquiry which defines a new culture.</p>
<p><b>2. Originality and relevance of the tasks being addressed</b></p> <p>Dr. Kulikauskas asks: How to nurture an alternative culture of independent thinkers? He wishes to foster a culture much like Lord Baden-Powell created Scouting, Bill and Dr.Bob founded Alcoholics Anonymous, and Jonas Basanavičius inspired the Lithuanian independence movement.</p> <p>Dr.Kulikauskas's research is defining how his envisaged culture runs counter to many assumptions in society and academia.</p> <p>Society assumes that all adults are of equal maturity. Dr.Kulikauskas has documented stages in the growth of independent thinkers. Hundreds of mature thinkers have provided unique answers to his questions: What is your deepest value in life? What is a question to which you seek an answer?</p> <p>Psychologists such as Maslow distinguish an ultimate state of maturity such as self-actualization. Instead, Dr.Kulikauskas is fostering a culture where independent thinkers, much like Socrates, can ever grow to live with more questions and fewer assumptions. Such an attitude distills one's self as one's deepest value which points one ever beyond what one knows.</p> <p>Many insist, "All truth is relative." But then such an absolute statement must be false. Not all truth is relative, and so there must be absolute truth. Dr.Kulikauskas has taken the concept of Everything as a starting point for absolute truth. He will document and share in his Overview a metaphysics of dozens of conceptual structures that he has observed in his investigations. Many are based on divisions of Everything, for example, into two perspectives for considering existence (inquiring &amp; answering), three perspectives for a cycle of participation (take a stand, follow through, reflect) and four perspectives as levels of knowledge (whether, what, how, why). Independent thinkers with very different values may yet share a conceptual language.</p> <p>Many conclude, "Great questions have no answers." Dr.Kulikauskas organizes workshops to show how to investigate any question to one's satisfaction. A very fruitful method is 1) existential: formulate the question so that we care, 2) phenomenological: recall examples from our personal experience, 3) conceptual: organize the examples into categories which capture their essence, 4) structural: organize the categories into a self-standing structure, 5) pragmatic: apply the structure as a real-life model to answer the question.</p> <p>Many suppose they can discover wisdom within a sheltered academic environment. Dr.Kulikauskas draws on his childhood quest to know everything and apply that knowledge usefully, his living in distraught Black American neighborhoods of Chicago, teaching "fighting peacefully" in Israeli-occupied Palestine, finding and serving clients for his Internet laboratory, falling in love in an enlightened Lithuanian village, challenging friends to take up their questions, living life as thousands of experiments, and adding a new insight to his philosophy every day.</p>

Many insist that God is beyond our reach (Heidegger) or that spiritual heights must be mystical (Ken Wilber) or that we must rely on God's purposes (Rick Warren). Dr.Kulikauskas interacts with God by ever imagining God's point of view. If God is not cruel, then there is validity to what we imagine, especially what helps us live on the edge. And we rely on our own imagination to participate in God's investigation: Is God necessary?

Theological or philosophical models are rarely tested in psychology and sociology. The dialogue between the Dalai Lama and psychologist Paul Ekman is atypical. Dr.Kulikauskas is keen to challenge his own theory with data from surveys about cigarettes, e-cigarettes and marijuana. Such large surveys are typically used to consider trends in usage, but they also provide information about behavior, intentions, beliefs, circumstances, friends and peers. Dr.Kulikauskas will use them to explore a gradient of susceptibility of individual minds with respect to a "group mind". He hopes to show that drug use is an escape from growing as an independent thinker.

**3. Project content and the work plan**

Dr.Kulikauskas's plan is to develop both theory and practice in fostering a culture of independent thinkers. He will, in parallel:

- \* COMPLETE his initial ideas with an Overview and a Handbook;
- \* INSPIRE a circle of fellow practitioners in Lithuania;
- \* DISCOVER scientists in other countries who are interested in his findings;
- \* TEST and push his ideas further by applying them to issues of addiction.

The four tasks above are listed in order of priority. The greatest risks to the project come from disturbing this order. Dr.Kulikauskas must assure himself that his philosophy is truly integral. He is writing a personal Overview for himself, in his native language, Lithuanian. He can at some future date rewrite it in English, but meanwhile can share it with those Lithuanian-speakers wishing to work personally with him. He must regularly organize workshops to encourage local circles of investigators in Vilnius, Klaipėda and the countryside. This will help him develop a Handbook which he can use with the English-speaking students he teaches at VGTU. Meanwhile, he needs to reach out around the world in English to discover which of his findings would be valued in other countries as academic talks and papers. This will help him communicate effectively. Finally, he can push himself further by looking for patterns in tobacco survey data by which he might bridge the chasm between theology-philosophy and psychology-sociology. This may lead to entirely new insights.

COMPLETE His most important deliverable is thus to write up a roughly 300 page Overview of his conclusions from hundreds of investigations he has undertaken. He has organized the Overview into 12 chapters:

- 1) How to Investigate One's Question. A summary of the Handbook.
- 2-7) From Relative Truth to Absolute Truth. Dr.Kulikauskas will expand upon his illustrated e-book from 2014.
- 8-11) Absolute Truth. Dr.Kulikauskas's paper "God's Dance" is the basis for 8). He is currently investigating How do people behave? and how should they behave? so as to unify the metaphysics he will present in 9). His survey of the ways of figuring things out is the basis for 10). His paper on the practical dynamics of prayer is the basis for 11).
- 12) How to Live Not Knowing. This may be an open ended, personal account of living from God's point of view and especially Jesus's vision of a kingdom of heaven, a culture for the independent thinker, the skeptic, the "poor-in-spirit".

His key challenge is to complete for chapter 9) his metaphysical conceptual language. His current work on behavior and morality is uncovering the dynamics of three conceptual languages: argumentation (how concerns arise), verbalization (how words get meaning) and narration (how events happen). By March 2018, he will be able to write-up his solutions or the outstanding technical challenges. He will thus have one year to write up his Overview by April 2019. He will be assisted by a graduate student who will research how his system relates to others in Western, Indian, Chinese, Japanese, Islamic and Judaic philosophy.

INSPIRE In December 2016, Dr.Kulikauskas started organizing monthly four-hour workshops on how to investigate one's question. The first workshops in Vilnius (How to affect a person positively?) and Klaipėda (How do concerns develop?) were attended, on average, by 9 people, mostly professors, teachers and graduate students. Preparing, conducting and documenting a workshop takes roughly one day. Dr.Kulikauskas will be assisted by two organizers and a videographer. At VGTU, he also led a Philosophy discussion section by helping his students investigate their questions. Such will be his minimal teaching duties. All of this activity is highly productive and yields excellent insights for the Handbook.

DISCOVER Giving talks and writing papers can be pursued as a social networking challenge. The goal is to share findings in a way that resonates both personally and with some academic community. Dr.Kulikauskas's preemptive risk strategy is to be active online at archives (philpapers.org, arxiv.org, researchgate.net) and help forums (stackexchange.com), to email academics with similar interests, and to submit abstracts to events (philevents.org). In 2013-2017, he gave 12 talks on aspects of his original philosophy at Lithuanian conferences. In 2017-2020 he will easily give another 12 talks in Lithuania, but more importantly, give 12 talks in other countries. He is currently submitting abstracts, and so expects his first talk in October 2017, and then one talk every 2 months, with 9 talks by April 2019. This will help him meet people who can direct him to the most receptive academic journals. He plans to expand on talks he gave in Lithuania to publish 12 papers. He expects his first paper to be published in July 2018, and then every two months, with 5 by April 2019. Additional topics include his theory of narration, taxonomy of paradox, and the relevance of his metaphysics for category theory (exact sequences, Yoneda lemma, Snake lemma, Bott periodicity).

TEST His 12th paper will relate his theory of behavior and morality to his analysis of survey data on the use of cigarettes, e-cigarettes and marijuana. In particular, he is familiar with the California Tobacco Survey of 50,000 students, in which a 1% subgroup is 500 students! He will align subjects along various gradients such as the degree to which their beliefs are pro-smoking or anti-smoking, or whether all, most, some or no friends smoke, and also group subjects hierarchically, for example, never smokers, former smokers and current smokers. By considering unusual groups, such as "never smokers whose friends all smoke" or "smokers, none of whose friends smoke", he will tease out the impact of behavior, intentions, beliefs, circumstances, friends and peers. By April 2019 he will know whether he will be able to publish a positive or negative result, and whether he should forego further research.

**4. Publication (dissemination) of the expected results of the project, planned production**

**Humanities and Social Sciences**

The reports, and if required the following scientific and/or other production publishing (intending to publish) the results of research obtained in the course of the project implementation shall be submitted on following schedule:

No	Type of production	Total	Description of planned production	Level of completion	
				the interim report, submitted on 08-04-2019, accompanied with	the final report, submitted on 08-10-2020, accompanied with
1	Monograph	1	A comprehensive Overview of Kulikauskas's philosophy, in Lithuanian, 300 pages.	completed and reviewed	issued (published)
2	Manual, reference book	1	Describe a science of investigating any question, "A Handbook for Investigators". In English. 200 pages.	-	issued (published)
3	National scientific seminar	36	A seminar to help investigate, for example, Tadas Snuviskis's question, How to foster the valuing of life?	arranged	-
4			A seminar to help investigate, for example, Ruta Jakstoniene's question, What upbringing instills authenticity?	arranged	-
5			A seminar to help investigate, for example, Zenonas Anusauskas's question, How to combine people's minds and memories so that they would work together more efficiently than separately? Andrius Kulikauskas's question, How to write a Handbook which a reader would find useful?	arranged	-

6		A seminar to help investigate, for example, Tautvydas Vėželis's question, What is the meaning of being?	arranged	-
7		A seminar to help investigate, for example, Ieva Vaitkevičius's question, Can God feel lonely?	arranged	-
8		A seminar to help investigate, for example, Vitalijus Denisovas's question, Are emotions constant states?	arranged	-
9		A seminar to help investigate, for example, Gediminas Gričius's question, How to physiologically measure one's internal feelings?	arranged	-
10		A seminar to help investigate, for example, Zenonas Anusauskas's question, How to solve the alcohol crisis in Lithuania?	arranged	-
11		A seminar to help investigate, for example, Dovid Katz's question, What difference can I make in my life to the survival or nonsurvival of a culture including one of its languages?	arranged	-
12		A seminar to help investigate, for example, Andrius Kulikauskas's question, How to behave morally in a moral quagmire where no matter what we do, we will do wrong?	arranged	-
13		A seminar to help investigate, for example, Thomas Gajdosik's question, How should I organize my life in a way that I will follow?	arranged	-
14		A seminar to help investigate, for example, Ruta Jakstonienė's question, What is the origin of creativity?	arranged	-
15		A seminar to help investigate, for example, Saulius Jusionis's question, How to educate people so that they wouldn't be stupid?	arranged	-
16		A seminar to help investigate, for example, Tautvydas Vėželis's question, How to change an immoral bubble economy to a just healthy economy?	arranged	-
17		A seminar to help investigate, for example, Alvydas Klimas's question, What determines students' behavior?	arranged	-
18		A seminar to help investigate, for example, Tomas Kiauka's question, How does the meaning of the word "God" arise?	arranged	-
19		A seminar to help investigate, for example, Tadas Snuviskis's question, How do people's differences evolve?	arranged	-
20		A seminar to help investigate, for example, Andrej Schelkun's question, How to best represent sound with visual art?	arranged	-
21		A seminar to help investigate, for example, Andrius Kulikauskas's question, Why are there four classical Lie algebras?	arranged	-
22		A seminar to help investigate, for example, Rimvydas Krasauskas's question, What is my purpose?	-	arranged
23		A seminar to help investigate, for example, Jovile Bareviciute's question, How to harmoniously and sustainably reconcile basic academic foundation with intellectual fashions and innovations in a contemporary university?	-	arranged
24		A seminar to help investigate, for example, Tadas Snuviskis's question, How to define life?	-	arranged
25		A seminar to help investigate, for example, Danute Verveckiene's question, How to work with children in our village?	-	arranged
26		A seminar to help investigate, for example, Tomas Kacerauskas's question, What is communication?	-	arranged
27		A seminar to help investigate, for example, Laima Monginaite's question, What is my mission?	-	arranged
28		A seminar to help investigate, for example, Audrone Anusauskiene's question, What to do so that people believe more in God?	-	arranged
29		A seminar to help investigate, for example, Nadiezda Pokstiene's questions, Why is it so hard to live conscientiously?	-	arranged
30		A seminar to help investigate, for example, Raimundas Vaitkevičius's question, How to purposefully and effectively manage one's time?	-	arranged
31		A seminar to help investigate, for example, Tadas Snuviskis's question, What is a political state?	-	arranged
32		A seminar to help investigate, for example,	-	arranged
33		A seminar to help investigate, for example,	-	arranged
34		A seminar to help investigate, for example,	-	arranged
35		A seminar to help investigate, for example,	-	arranged
36		A seminar to help investigate, for example,	-	arranged

74		Present ideas about survey of smoking and behavior and morality.	-	issued (published)

**5. The scientific competence of the project leader and other principal project implementers, and the substantiation of the composition of the group of the principal project implementers**

Dr.Kulikauskas's deepest value is living by truth. His dedication and ambition before God are matched by profound skills as a thinker, writer and organizer. He lives and inspires excellence.

Dr.Kulikauskas is one of the best educated scientists in Lithuania, with Bachelor degrees in Math and Physics from the University of Chicago in 1986, and a Ph.D. in Mathematics from the University of California, San Diego in 1993, as well as a year of independent study in Philosophy with Dr.

R.Pavilonis at Vilnius University in 1988-1989 during Lithuania's Independence movement. He has also taken graduate level classes in syntax, automata theory and Kant's philosophy.

He is a relentlessly original, independent researcher. His 12 talks in 2013-2017 were based on challenges he tackled over the years:

- 1989 He showed how the divisions of everything which define states of mind are organized in an eight-cycle and that consciousness ever takes us forward by three perspectives.
- 1993 He derived 12 topologies, the vocabulary for imagining concepts, in terms of "mind games", and thus rethought Kant's theory of 12 categories.
- 1995 He developed a model deriving emotional responses from cognitive expectations.
- 1996-1998 He developed a therapy which explains how a person who is riled has confused the truth of the heart and the truth of the world.
- 2004-2010 He collected and analyzed "deepest values" from 700 independent thinkers, and systematized 200 investigatory questions.
- 2008 He sketched out how the many conceptual structures he had documented can arise by imagining God considering, Is God necessary?
- 2011 He systematized 24 ways of figuring things out in math.
- 2011 He surveyed the ways Jesus figured things out and noted how the Son favored "the good kid" but the Father favored "the bad kid".
- 2010-2013 He summarized his philosophy with large art shows which distilled his thinking into aphorisms: "God does not have to be good", "Life does not have to be fair".
- 2014-2016 He developed a theory of primary, secondary and tertiary responsibility by which he examined 25,000 pages to chase down the Lithuanian leadership's role in the Holocaust.
- 2015 He overviewed 40 examples where he had prayed in twos-and-threes in the countryside and explained the effectiveness in terms of the entropy of systems that are ambiguously open and closed.
- 2016 He showed how the moods evoked by Tang Dynasty poetry can be explained in terms of geometric transformations of the boundary between self and world.
- 2017 At a workshop he collected personal examples of "caring" and discerned 8 types which he related to Dasein's modes of being.

This is just a sample of some of the 200 imaginative investigations he has noted in his database of Ways of Figuring Things Out.

Although he has published few academic papers, he is a successful writer. As a social entrepreneur he won 5 travel grants to give presentations, including at the MIT Media Lab Think Cycle conference in Bangalore, India, for his paper, "An Economy for Giving Everything Away". Chris Messina cited that paper as a key inspiration in founding the worldwide BarCamp movement of un conferences.

Ultimately, his goal is to inspire deeply personal, creative investigation. He has assembled a supportive team:

- Tadas Snuiškis is a graduate student who knows 10 languages and loves philosophical systems. He will master Dr.Kulikauskas's system, help him collect examples for the Overview from different cultures, and organize workshops.
- Rūta Jakštonienė, the program leader at VDA Klaipėda for modern art and media studies, is likewise organizing workshops.
- Zenonas Anušauskas from Andrius's village is a videographer who will help with workshops locally and across Lithuania.
- Rimvydas Vaitkevičius is a statistician for psychologists.
- Physicist doc.Thomas Gajdosik, mathematics doc. Rimvydas Krasauskas and Judaic studies prof. Dovid Katz will, as ever, serve as advisors to Dr.Kulikauskas to enjoy and critique his ideas.

Dr.Zhu is discussed in Nr.6

#### **6. Contribution into the project by project partners and cooperation of the implementing institutions**

Dr. Shu-Hong Zhu is a pioneer in the use of telephone counseling for tobacco cessation. He is the Director of CRITC, California Smokers' Helpline and Asian Smokers' Quitline. 100 people work for him to help tens of thousands of people to quit smoking. His centers are worldwide leaders in developing such services. Moreover, Dr. Zhu is a creative scientist whose high standards yield results of philosophical significance.

Overall, does counseling actually help? This is not a trivial question! The case of smoking, however, presents very measurable outcomes. Smokers who try to quit either succeed or fail. Of those who quit smoking for one day, how many will manage to not smoke for an entire year? The answer was 4.1% for the control group, which did not receive counseling, and 7.5% for those who did receive counseling. Health politics required that those who did not initially receive counseling still have the opportunity to call again to receive it. The experiment had to be designed to factor out an analogous "virtual" group from those who did initially receive counseling. Ultimately, the unusually large number of participants - 3,279 - enabled Dr.Zhu and his team to report in 2002 in the New England Journal of Medicine that counseling definitely did help. This example illustrates the wealth of data and subtle experimental design needed to definitively conclude that counseling truly helps.

Dr.Kulikauskas has worked remotely (by Skype and email) for Dr.Zhu since 2012 as a writing consultant. Dr.Kulikauskas synthesizes literature, analyzes data and statistics, provides comments on special tobacco control topics and edits papers.

Dr.Zhu and UCSD will provide access to surveys such as the California Tobacco Survey, which asks roughly 50,000 youths some 200 questions. They will help with statistical questions and theoretical questions in psychology and public health. They will also critique drafts of Dr.Kulikauskas's papers inasmuch as they make use of their surveys.

Dr.Kulikauskas is applying his skills as a database programmer and data analyst to tease out the relationships between behavioral gradients (such as how intensely one smokes) with binary choices (such as whether one intends to quit and whether one has tried to quit). He will look for the degree to which an individual stands out from any particular subpopulation. As a philosopher, he will explore, model and test related ideas about human behavior and morality: how people learn to take responsibility for the boundary between their own mind and the "group mind"; how participation in multiple subcultures fosters independent thinking; how listening to our moods helps us grow by reflecting on our beliefs under different emotional circumstances, whereas drugs have us escape our moods and align with our peers.

This partnership is meaningful to VGTU as a technical university because it shows how philosophy, psychology and sociology can make excellent use of mathematics, statistics and computer science.

#### **7. The international dimension of the project and the experience of the project implementers in the area of international cooperation**

Dr.Kulikauskas's proposal places Lithuania at the center of a culture of independent thinkers around the world. His upbringing as a Lithuanian nationalist has inspired his wish to assemble a nation of independent thinkers, very much in the spirit of Jesus's Sermon on the Mount.

Dr.Kulikauskas was born in a Lithuanian family in California in 1964. He exercised his right to Lithuanian citizenship in 1998. Thus his love of the Lithuanian language, his participation at Lithuanian conferences and his life in the Lithuanian countryside all naturally contribute to Lithuania's integration into the broader world.

His current proposal is much inspired by Minciu Sodas, his online laboratory by which he served and organized independent thinkers around the world from 1998-2010. Minciu Sodas means "The Orchard of Thoughts" as participants came to learn. These Lithuanian words adorn the Wikipedia in Kiswahili, the XML for Topic Maps Authoring Group, the Blogging Positively guide for addressing the HIV/AIDS epidemic, and hundreds of online projects around the world.

Minciu Sodas was a showcase of practical philosophy:

- Online working groups were based on leaders' deepest values: F.Nahrada, Vienna - optimal interplay (global villages), J.Feldman, Rhode Island - holistic helping (Africa), P.McLean, London - learning from each other (distance learning), J.Rogers, Wales - participatory society (community currency), S.Kongere, Kenya - motivation through sacrifice (development), A.Anusauskiene, Lithuania - acting ever more broadly (activism), E.Hurn, Wales - fighting peacefully (nonviolence), S.Bosserman, Ohio - social agriculture.
- Minciu Sodas organized the spectacular Pyramid of Peace: 100 peacemakers on-the-ground and 100 online assistants who Dr.Kulikauskas trained in nonviolent engagement to avert genocide in Kenya in 2008.
- Dr.Kulikauskas was one of 16 winners out of 1,000 applicants for the Knight News Challenge Award. He won \$15,000 to blog weekly at the PBS

website IdeaLab about his idea for Africa, the Includer.

- Minciu Sodas's team from Serbia, Kenya, Israeli-occupied Palestine, Missouri, Nigeria, India, Cameroon and Lithuania organized "My Food Story", a collection of 2,000 food stories, for \$24,000, as a pilot project for UnaMesa Association in Silicon Valley.
- Dr.Kulikauskas created an import/export format for software tools for organizing thoughts, funded by TheBrain and MindManager.
- He also organized in Vilnius the workshop "Ethical Public Domain: Debate of Questionable Practices" for the EU thematic network COMMUNIA.
- Minciu Sodas served 30 clients by organizing teams of independent thinkers working openly on projects yielding Public Domain content or open source software

Ultimately, Minciu Sodas failed as a business. It's culture was too weak, but even so, was quite remarkable. The focus on deepest values and investigatory questions made it possible for independent thinkers to work together openly, in the Public Domain, with integrity.

Dr.Kulikauskas has since focused on the theoretical framework for his philosophy, his Overview. He has also worked to establish himself as an academic, as with this proposal. His 12 academic papers, including on tobacco control, may well generate interest, and certainly Dr.Zhu is very supportive for this and future projects. The budget includes travel to UCSD near the beginning and near the end. Dr.Kulikauskas will maximize opportunities there, as well as in his travels to the 10 other destinations where he will give talks.

However, the most remarkable outcome will be a local circle of investigators who enjoy investigating their questions, helping each other at workshops, making use of the Handbook, and sharing a conceptual language, which the Overview will describe. If Dr.Kulikauskas and his team learn how to inspire local activity, then the Handbook will inspire a global following, much like Lord Baden-Powell's book, "Scouting for Boys".

#### 8. Research conducted by and the resulting scientific and/or technological production obtained by the project leader and other principal project implementers

In 2012-2017, Dr.Kulikauskas worked as a writing consultant for Dr.Zhu and the University of California, San Diego. He helped Dr.Zhu write papers in tobacco control. These papers considered what conclusions for public policy can be drawn from trends in prevalences for cigarettes, e-cigarettes and marijuana.

University rules prohibited Dr.Kulikauskas from being a coauthor on papers because independent contractors may not be paid to do research.

Dr.Kulikauskas spent hundreds of hours analyzing two surveys, the UCSD Smoking Study of some 10,000 adults and the California Tobacco Survey of some 50,000 middle and high school students. He considered many theoretical questions which he discussed with Dr.Zhu but which led beyond the latter's priorities as Director of the Center for Research and Interventions in Tobacco Control.

The current project offers Dr.Kulikauskas the opportunity to apply this wealth of data to the study of philosophical questions in human behavior and morality.

#### 9. The necessity of a permit from an authorised body to carry out the research

NO
